

WiFi High Density Accesspoints

XR-320

XD2-230

Description

These wireless arrays are the first modular WiFi products of their kind. They are characterized by upgradeability, excellent scalability, high performance, and integrated safety. They consist of modular multi-state integrated access points (2.4 GHz and 5 GHz) with powerful directional antennas, wireless controller, multi-gigabit switch, firewall, threat sensor and spectrum analyzer in a single, modular housing. Their fully modular construction and software controlled via Web interface allow extremely flexible use of the array and sophisticated fine-tuning to each operational scenario.

Array comprises:

- WiFi array, the choice of 2 to a maximum of 16 integrated access points, depending on configuration, with up to 1.3 Gbit/s
- integrated WiFi controller
- standard mounting kit for ceiling mounting
- array operating system, including analysis and control software
- optional: Premium Support for hardware and software

Due to the modular design of the WLAN portfolio the WiFi arrays are already geared up to future WiFi standards, therefore providing good investment protection.

Application

The Xirrus WiFi arrays are designed mainly for wireless networks with high user density, a wide variety of devices and/or high bandwidth requirements (video applications, for example).

General Properties

Atmospheric humidity	0 - 0.9 %
Management interfaces	- Command Line - Web Interface - Xirrus Management System (On-premise or Cloud)

Electrical properties

EMC	EN 55022, EN 55024
